

JUNE 24 - 27, 2024

MIAMI BEACH,  
FLORIDA

## TURNING AMBITION INTO ACTION

The nuclear industry is faced with great opportunity, galvanized by the need to accelerate the deployment of innovation in the collective pursuit of global clean energy goals. That's why in June 2024, the Global Forum for Nuclear Innovation (GFNI) is bringing change makers and cross-pollinators from across the world to Miami.

## WHAT SETS GFNI APART?

Much like our [last event in London](#), GFNI 2024 will disrupt your expectations of a nuclear energy conference. Turning ambition into action requires more practice and less preach, so each day will be rich in experiential learning and creative engagement, providing plenty of opportunity to roll your sleeves up and get involved.

This immersive experience will focus on nuclear energy and provide participants with a diverse toolkit and courage to help tackle the barriers to innovation in their organizations. The event will be full of innovative thinking, problem solving, and collaborative workshopping.

# A CONTINUING EVOLUTION

In 2018, the GFNI concept arose as an industry-wide call to collectively accelerate change and more nimbly translate innovative ambition into action as it works toward global decarbonization goals.

Since then, efforts led by the International Atomic Energy Agency (IAEA), OECD Nuclear

Energy Agency (NEA), National Nuclear Laboratory (NNL), EPRI, and local host utilities have convened a global community with not only the ambition, but also the ability to drive innovation and positive change in the nuclear sector.

To date, two GFNI events in Gyeongju, South Korea and London, UK have equipped a

growing network of nuclear innovators to think bigger and be bolder as they impact change in their organizations and in the industry.

EPRI, Florida Power and Light Company, and NextEra Energy will be the home hosts of the 2024 event at the Eden Roc hotel in Miami Beach.

## WHO WILL ATTEND

Global influencers, decision makers, and achievers at all organizational levels, including several outside the nuclear industry, will help inspire action and cross-pollinate ideas, particularly around 4 Grand Challenges identified at GFNI 2022:

- Operating a Lean Machine
- No Talent, No Sector
- Beyond Electricity
- Safe Doesn't Have To Be Slow

## EVENT SCHEDULE OVERVIEW

MON • JUNE 24	Evening Welcome Reception
TUES • JUNE 25	Full Day • Discussions and Immersive Sessions
WED • JUNE 26	Full Day • Discussions and Immersive Sessions
THURS • JUNE 27	Half Day Immersive Session and Possible Local Experience
